

Remarks

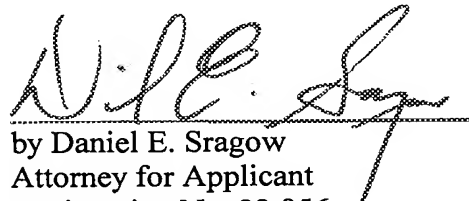

Claims 6-12, 16 and 17 have been clarified to change acronyms to well known terminology. Claims 21-27 have been added.

The Examiner has required restriction between Invention I, Claims 1-9 and 18-20, and Invention II, Claims 10-17. The Examiner is respectfully requested to reconsider this requirement. Claims 1-9 and 18-20 are directed to a method for establishing a signaling connection between a client terminal and a communication network. Claims 10-17 are directed to a method for authenticating a mobile terminal with a wireless local area network using a cellular system server for authentication information. It is clear that Claims 1 and 10 are directed to the same intervention, but use different terminology. The Examiner is therefore respectfully requested to withdraw the requirement for restriction.

In accordance with the Examiner's requirement, the Applicant elects, with traverse, the invention identified by the Examiner as Claims 1-9 and 18-20. The Applicant submits that newly submitted Claims 21-27 are examinable with Claims 1-9 and 18-20.

The Applicant has added two (2) additional independent claims, and seven (7) total additional claims. Please charge any fee for such additional claims to the Applicant's Deposit Account 07-0832.

Respectfully submitted,
Guillaume Bichot
